IN THE CLAIMS

Claims 1-20 (Canceled).

- 21 (Previously Presented). A system comprising:
 - a processor-based device;
 - a media player coupled to said processor-based device; and
- a watermark detector coupled to said media player, said watermark detector to detect a watermark included with an advertisement and to control operation of said media player in response to detection of the watermark.
- 22 (Previously Presented). The system of claim 21 further including a storage coupled to said device, said storage storing instructions that, if executed, enable the processor-based device to monitor the watermark included with the advertisement and accrue a credit after determining the advertisement was played.
- 23 (Previously Presented). The system of claim 22 wherein said storage stores instructions that, if executed, enable the device to allow access to content through said media player.
- 24 (Previously Presented). The system of claim 22 wherein said storage stores instructions that, if executed, enable the device to accrue a reward in return for playing the advertisement.
- 25 (Original). The system of claim 21 wherein said watermark detector determines whether an advertisement was played at a predetermined speed.
- 26 (Original). The system of claim 21 wherein said storage stores content for subsequent replay by said media player.

- 27 (Previously Presented). The method of claim 1 including determining that the advertisement was played, based on the watermark.
- 28 (Previously Presented). The article of claim 11 storing instructions that, if executed, enable the processor-based system to determine that the advertisement was played, based on the watermark.
 - 29 (Previously Presented). A method comprising:

 monitoring a watermark included with an advertisement;

 accruing a credit after determining that the advertisement was played; and

 controlling operation of a media player in response to monitoring the watermark.
- 30 (Previously Presented). An article comprising:

 a medium storing instructions that, if executed, enable a processor-based system
 to:

monitor a watermark included with an advertisement;
accrue a credit after determining that the advertisement was played; and
control operation of a media player in response to monitoring the
watermark.

- 31 (New). The article of claim 30, said medium storing instructions to control the media player to play content based on said credit and to use said watermark to accrue said credit.
- 32 (New). The method of claim 29 including controlling operation of the media player to play content based on said credit and to use said watermark to accrue said credit.
- 33 (New). The system of claim 1, said detector to accrue a credit based on detection that the advertisement control operation of said media player was played and content based on said credit.
